List of Bioengineered Foods ^[1]

The Agricultural Marketing Service (AMS) developed the List of Bioengineered Foods to identify the crops or foods that are available in a bioengineered form throughout the world and for which regulated entities must maintain records. These records will inform regulated entities about whether they must make a bioengineered food disclosure. The list includes any BE crops or foods that are to capture any BE crops or foods that are currently in legal production somewhere in the world. New BE products continue to be developed. Even if a food is not included on the List, regulated entities whose records show that a food they are selling is bioengineered must make appropriate disclosure of that food. AMS will review the List annually and, if necessary, make updates through the federal rulemaking process.
